

ZEROnet

ZeroNet is *the* national charging network for electric cars in the UK. It's designed by EV drivers with a central belief that **drivers have to be put first**. It is used to extend the range of cars, find locations to visit for holidays or even day trips out.

ZeroNet is well respected for:

- Simple, robust and reliable Charging Stations.
- Ease of use.
- Listening to drivers.

While other networks suffer failures due to lack of mobile phone signals, complex back end systems or just access problems, **ZeroNet works all the time, every time**.

All of ZeroNet's charging stations are **pay-as-you-go or free!** Drivers only have to pull up and plug in.

ZeroNet sites love what providing EV charging says about them. That is, that they are forward thinking, innovative and different from the local competition.

A quarter of ZeroNet sites have on-site renewable energy generation.

Drivers like ZeroNet because:

- They can eat, sleep, work or play while charging.
- There's no membership.
- There's no subscription.
- There's no need for Smartcards.

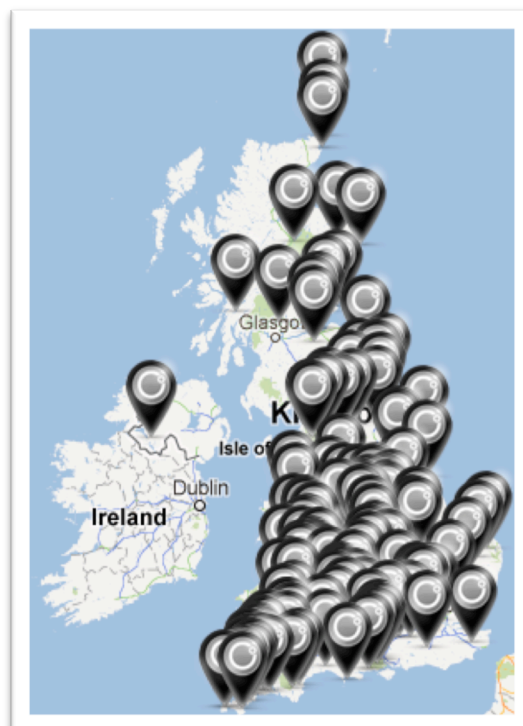

A business that joins ZeroNet:

- Is promoted directly to drivers.
- Gets money off when switching to Octopus Energy.
- Are highlighted on our map with a showcase image and description.
- Gets listed on multiple SmartPhone Apps and websites
- Can point to the wider community they are a part of when getting green tourism accreditation.
